# OneHealthPort's Medication Management Information Program

Presented to:

The State Agency Technical Advisory Group Meeting

February 7, 2006

Rick Rubin, President & CEO
(206) 624-3128 x111 – Rickr@onehealthport.com
Sue Merk, VP Business Development & Product Management
(206) 624-3128 x112 – Smerk@onehealthport.com

OneHealthPort

Building Health Information Infrastructure – Competition vs. Collaboration

The entire scope of the work to be done

Enterprise

Enterprise

Enterprise

Enterprise

The scope of the collaborative opportunity

Collaborative Criteria

Speed to local critical mass

Sustainable business case

Leverage competitive investments

Emphasize infrastructure

Highly feasible

ePrescribing

- High interest due to clinical value of medication information, cost issues and administrative efficiency
  - Part D, JACHO medication reconciliation requirements, etc.
- Major initiatives underway to link trading partners
  - RxHub, SureScripts
- Medication arena is ready – data standardized and in electronic form
- Challenges
  - No critical mass of local medication information
  - Business case issues – additional work for prescribers not always offset by additional benefits
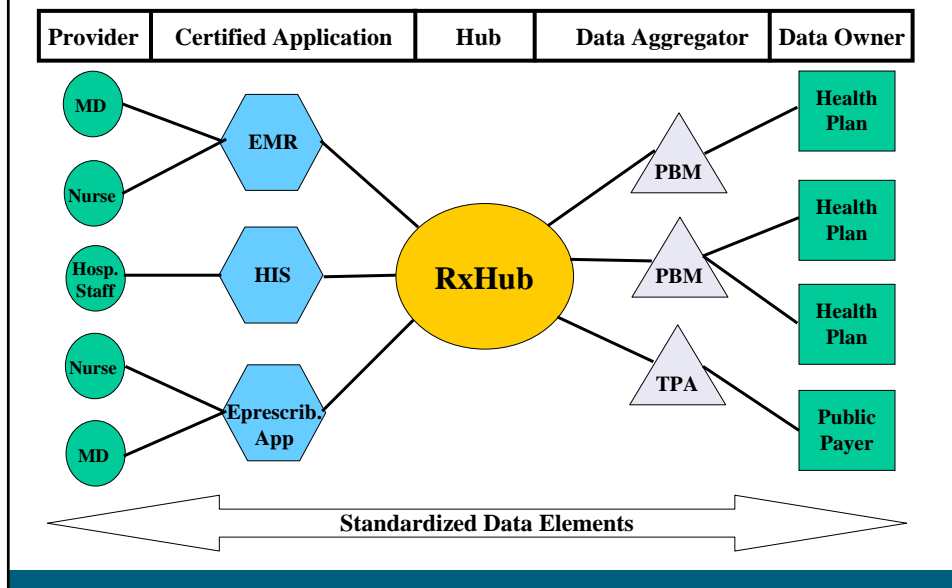

Medication Management Information Program Objectives

- Deliver critical mass of Med History and benefit-level formulary info to providers through a common hub
  - Deliver real time benefit information at point of service
  - Increase formulary compliance
  - Improve patient safety and assist continuity of care
- Put in place key building block for the local health information infrastructure
  - Add value to those investing in EMRs
  - Provide additional push for those considering EMRs
  - ePrescribing apps offer alternative to a full EMR
  - Medication reconciliation for hospitals (JCAHO)
- Establish a foundation for future collaborative initiatives in the pharmacy area (ePrescribing)

Scope of First Phase

- Medication History will be based on pharmacy claims data available through PBM, TPA, etc.
  - Initial focus on insured lives and claims paid by insurance
  - Explore other data sources in future (pharmacy chains)
- Information will be delivered to providers via certified applications
  - EMRs, hospital information systems, ePrescribing tools
- 1 year of Med History, current formulary info from queried health plan available to authorized users
  - No aggregation for analytical purposes
- Promote the value of Medication Management Information and ePrescribing among WA providers

Assembling the Value Chain

Provider	Certified Application	Hub	Data Aggregator	Data Owner

MD

EMR

Nurse

Hosp. Staff — HIS — **RxHub**

Health Plan

Health Plan

Health Plan

Public Payer

Standardized Data Elements

Current Status

- Regence, Premera, state UMP committed to participate (critical mass)
  - GHC assessing participation
- Starting to recruit other content owners
  - Health plans, public payers, etc.
- Selected RxHub as Hub vendor
- Facilitating connections to RxHub
- Getting ready to roll out promotional campaign to provider community and their technology partners
